```

1. Turn off compression:

```
$ git config --global core.compression 0
```

2. do a partial clone to truncate the amount of info coming down:

```
$ git clone --depth 1 http://sammeth.net/bitbucket/scm/barna/barna.git
```

3. When that works, go into the new directory **barna** and retrieve the rest of the clone:

```
$ cd barna
$ git fetch --unshallow
```

4. Pull:

```
$ git pull --all
```
