

"W" and "C" in Event Nomenclature

Another question, what is the "demsion" mean? Why when I run the ASTA code, then the new file give me a new gene_id with a "W" or "C" as an end tag, like gene_id "NW_019014588.1:416353-423997C", what is the C or W mean?
