

Correct gene expression profile formula

Formula on this page: [4.1.1 - Gene Expression Profile](#) differs from that one: <http://nar.oxfordjournals.org/content/suppl/2012/06/29/gks666.DC1/nar-02667-n-2011-File002.pdf> (page 6)

What is the correct one?

I'm also a bit confused about EXPRESSION_X1 value. Is the first formula is correct ([4.1.1 - Gene Expression Profile](#)) EXPRESSION_X1 should equals to b^2 but not b .

Am I right?

Thanks
