

An error at library preparation step

I use flux-simulator-1.2.2-20140614022955, since in this version you have fixed the problem with the short length transcripts (<3 nt).

Now the program crashes at library preparation step

```
[LIBRARY] Reverse Transcription
[LIBRARY] Configuration
Mode: RH
PWM: default
RT MIN: 500
RT MAX: 5500

Processing Fragments * FAILED
[ERROR] Error while fragmenting : null
java.lang.NullPointerException

```

Could you please help?

Gleb
